**INTRODUCING THE NEW AND IMPROVED
DIAMOND BLADES FROM HUSQVARNA**

Husqvarna is thoroughly committed to your needs and your workday. In everything we do, we focus on simplifying your workload, making it easier, faster and safer to get the job done.

When working with power cutters, the combination of high performance and safety is of the essence, but one must also factor in speed, the time it takes to find the right blade and mount it correctly.

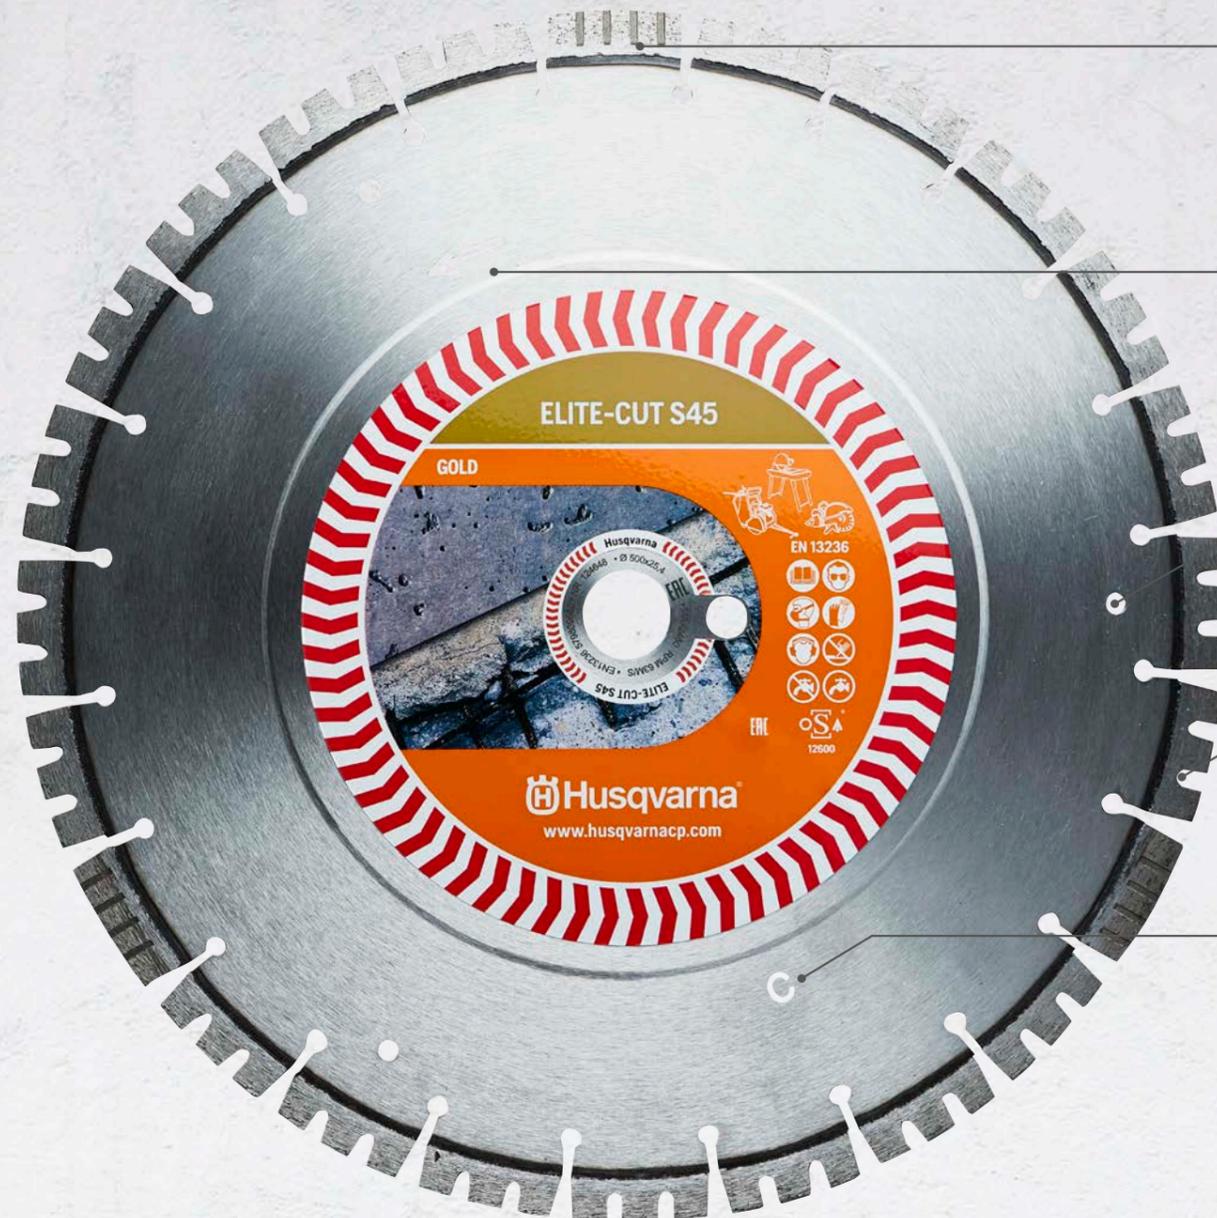

SAFETY AND CONFIDENCE

This is why Husqvarna S series blades for handheld machines now feature a number of intuitive and immediately recognizable indicators. The application markers will make you confident you're always using the right blade for the right job, whereas the wear indicators will give you information on the blade's wear and side clearance, which helps to reduce the risk of pinching or kickback. And thanks to the directional arrow, you can easily make sure the blade is always mounted correctly.

The features will add ample peace of mind when it comes to safety for the operator. However, bear in mind that you always need to take additional precautions, such as wearing appropriate protective equipment.

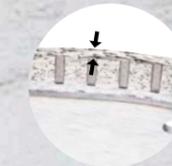

For rental businesses, the measuring holes will help keep track of the total wear between uses, making it easy to assess the need for new blades as well as overall costs.

Smarter blades, for an easier, more effective cut. Every time.
Husqvarna diamond tools. For a better way of working.

SIDE CLEARANCE

To add peace of mind and reduce the risk related to pinching and/or kickbacks, the blades feature a thickness differentiator that provides a clear, instant visual indicator for the blade's side clearance.

DIRECTIONAL ARROW

Thanks to the directional arrow, the risk of mounting the blade the wrong way is minimized. By always having a clear-cut view of the blade's intended rotating direction, mounting will be safer, easier and more intuitive.

MEASURING HOLES

The measuring holes are a truly convenient way to measure the wear of their blades between uses. This is especially beneficial for rental businesses, providing an easy way to keep tabs on the wear of their equipment.

WEAR INDICATOR

In order to provide a reliable indicator for when it's time to change the blade, the segment's height clearly shows the maximum approved wear-out level of the diamond part.

APPLICATION MARKER

Each blade is fitted with a clear marker, highlighting its intended application, making it faster and easier to pick the right blade, depending on the task at hand.
